

Connor Kennelly Plunkett

Full Stack Software Engineer

Connor.plunkett@gmail.com

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years at Lowe's building and shipping enterprise reverse-logistics software used across 1,700+ stores. Strong across the full stack — React, Ionic, TypeScript, and Node.js — with a track record of owning complex features end to end, from React/Ionic handheld UIs through BFF services and data integrations. Fluent in agentic, AI-assisted development workflows (Claude Code, Windsurf, Cursor) and Agile delivery. Recognized with Lowe's Key Contributor Award.

WORK EXPERIENCE

Full Stack Software Engineer

May 2022 – Present

Lowe's Home Improvement | Charlotte, NC (Remote)

- Owned end-to-end delivery of the **Buyback** module in Lowe's Returns Mobile app (React/Ionic on Android handhelds across 1,700+ stores) — picking and quantity flows, item summary/detail and vendor-details screens spanning Vendor Pickup, RTV, and Hazmat dispositions, completed-tab history, and liquidation guidance.
- Re-architected the buyback data model around a unique buyback ID at the BFF layer, enabling buybacks to automatically reopen when on-hand counts change from returns or cycle recounts — closing a standing data-integrity gap.
- Built the **CRTV Admin Portal** in React, TypeScript, and AG Grid on a server-side data model — paginated infinite scroll over a 100k+ item catalog with server-side filtering/sorting, per-user column-order persistence, and API timeout handling — giving SSC and operations teams secure configuration control at scale.
- Delivered the **Vendor Directed Return Authorization** flows end to end: item/disposition detail entry, dispose and hazmat-dispose return-method handling, completed-VDD listing, RA pre-population, and multi-SKU/multi-quantity input for items tied to a single vendor.
- Integrated Returns Mobile with the new **Out-for-Repair (OFR)** service — pushing instance data via the OFR API, handling completed-OFR patch and routing logic, and building the unrepairable-unit safety-concern workflow.
- Built **Service Charges** (vendor name/number search and the service-charge selection workflow) and **Inventory Transfer** order handling (cancelled-order bucket and listing on the Transfer Order screen).
- Built **liquidation pallet management and shipment** flows — UPC-scan/manual pallet item assignment, create/start shipment, and load-to-truck — supporting disaster-recovery operations.
- Built the **Sales-floor and Receiving-floor Damages** workflows across sellable, non-sellable, hazmat, and markdown paths, with the matching completed-tab and confirmation experiences.
- Led the **V3 application rewrite** onto Ionic/React/Vite and drove platform upgrades — React Query v5, JDK 21 / Micronaut 4 on the BFF, multi-tenant request routing, and ongoing Snyk vulnerability remediation — improving performance, security posture, and maintainability.
- Authored a Firebase scripting layer to manage feature flags and configuration across 1,700+ stores; partnered in Agile/SCRUM on requirements, code reviews, and tight releases. (Lowe's Key Contributor Award.)

Student Full Stack Developer

Apr 2019 – Aug 2019, May 2020 – Aug 2020, May 2021 – Aug 2021

Appalachian State University | Boone, NC

- Built full stack educational tools including a Slideshow application using React (frontend) and PHP/PostgreSQL (backend), improving learning engagement and content delivery.
- Maintained and administered university databases via Canopy CMS, ensuring reliable content storage, retrieval, and data integrity for production applications.

Software Developer Intern

May 2018 – Aug 2018, Dec 2018 – Jan 2019

Electric Power Research Institute (EPRI) | Charlotte, NC

- Contributed to a major overhaul of epri.com, migrating the frontend from Angular to React and improving performance and maintainability.

- Integrated OAuth 2.0 and OpenID Connect with Auth0 and Ping Identity in collaboration with security teams — directly applicable to secure, DoD-environment software requirements.
- Built API layers using Node.js (Express), integrating Cosmos DB and SQL databases for robust data management and frontend hydration.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Java, Kotlin, Python

Frontend: React, Ionic, Next.js, TanStack Start, Vue, Nuxt, HTML, CSS, Tailwind CSS, Android Studio

Backend & APIs: Node.js (Fastify, Express), Micronaut, REST APIs, BFF architecture, PHP

Databases: PostgreSQL, MongoDB, Cosmos DB, SQL, Firestore

Cloud & DevOps: Firebase, Jenkins CI/CD, Proxmox

Security & Auth: OAuth 2.0, OpenID Connect, Auth0, Ping Identity, Snyk

Testing & QA: Cypress, Playwright, React Testing Library

AI & Dev Tools: Claude, Claude Code, Windsurf, Cursor, VS Code, Jira, Agile/SCRUM

EDUCATION

Bachelor of Science in Computer Science May 2022

Appalachian State University | Boone, NC

AWARDS

- Lowe's Key Contributor Award — recognized for high-impact engineering contributions and delivery of enterprise solutions.
